About the Tutorial

Materialize is a UI component library created with CSS, JavaScript, and HTML. Materialize UI components help in constructing attractive, consistent, and functional web pages and web apps, while adhering to modern web design principles such as browser portability, device independence, and graceful degradation. It helps in creating faster, beautiful, and responsive websites. It is inspired from Google Material Design.

Audience

This tutorial is meant for professionals who would like to learn the basics of Materialize and how to use it to create faster, beautiful, and responsive web pages and apps. This tutorial explains all the fundamental concepts of Materialize.

Prerequisites

Before proceeding with this tutorial, you should have a basic understanding of HTML, CSS, JavaScript, Document Object Model (DOM), and any text editor. In addition, it will help if you know how web-based applications work.

Execute Materialize Online

For most of the examples given in this tutorial, you will find a **Try-it** option. Use this option to execute your Materialize programs on the spot and enjoy your learning. Try the following example using the **Try-it** option available at the top right corner of the following sample code box.

```

1. Materialize – Overview

Materialize is a UI component library created with CSS, JavaScript, and HTML. Materialize reusable UI components help in constructing attractive, consistent, and functional web pages and web apps while adhering to modern web design principles such as browser portability, device independence, and graceful degradation.

Some of its salient features are as follows:

- In-built responsive designing.
- Standard CSS with minimal footprint.
- New versions of common user interface controls such as buttons, checkboxes, and text fields adapted to follow Material Design concepts.
- Enhanced and specialized features such as cards, tabs, navigation bars, toasts, and so on.
- Free to use and requires jQuery JavaScript library to function properly.
- Cross-browser, and can be used to create reusable web components.

Responsive Design

Materialize has in-built responsive designing so that the website created using Materialize will redesign itself as per the device size. Materialize classes are created in such a way that the website can fit any screen size.

The websites created using Materialize are fully compatible with PC, tablets, and mobile devices.

Extensible

Materialize is by design very minimal and flat. It is designed considering the fact that it is much easier to add new CSS rules than to overwrite the existing CSS rules. It supports shadows and bold colors. The colors and shades remain uniform across various platforms and devices.

And most important of all, it is absolutely free to use.

2. Materialize – Environment Setup

How to Use Materialize?

There are two ways to use Materialize:

Local Installation - You can download the **materialize.min.css** and **materialize.min.js** files on your local machine and include it in your HTML code.

CDN Based Version - You can include the **materialize.min.css** and **materialize.min.js** files into your HTML code directly from the Content Delivery Network (CDN).

Local Installation

- Go to <http://materializecss.com/getting-started.html> to download the latest version available.
- Then, put the downloaded **materialize.min.js** file in a directory of your website, e.g. /js and **materialize.min.css** in /css.

Example

Include the **css** and **js** file in your HTML file as follows.

```
<!DOCTYPE html>
<html>
  <head>
    <title>The Materialize Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <link rel="stylesheet"
href="https://fonts.googleapis.com/icon?family=Material+Icons">
    <link rel="stylesheet" href="materialize.min.css">
    <script type="text/javascript" src="https://code.jquery.com/jquery-
2.1.1.min.js"></script>
    <script src="materialize.min.js"></script>
  </head>
  <body>
    <div class="card-panel teal lighten-2"><h3>Hello World!</h3></div>
  </body>
</html>
```

It will produce the following result.

CDN Based Version

You can include the **materialize.min.js** and **materialize.min.css** files into your HTML code directly from the Content Delivery Network (CDN). **cdnjs.cloudflare.com** provides content for the latest version.

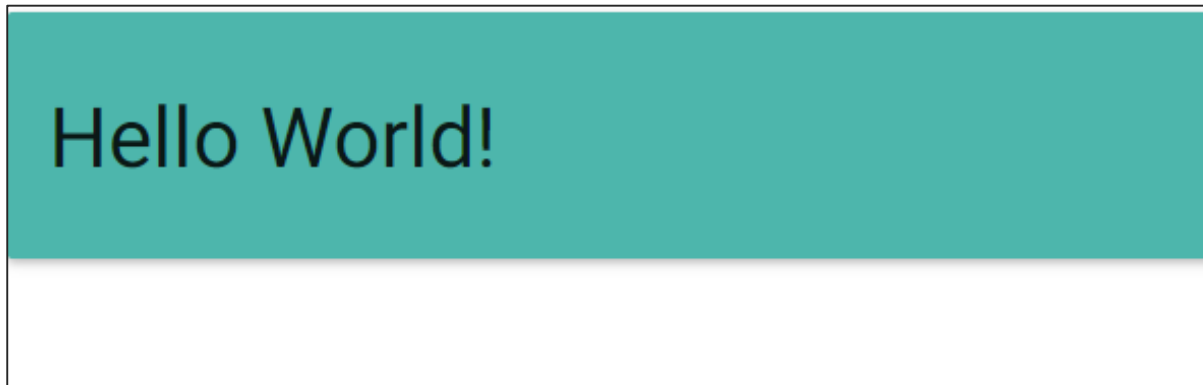

We are using cdnjs.cloudflare.com CDN version of the library throughout this tutorial.

Example

Rewrite the above example using **materialize.min.css** and **materialize.min.js** from cdnjs.cloudflare.com CDN.

```
<!DOCTYPE html>
<html>
  <head>
    <title>The Materialize Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <link rel="stylesheet"
href="https://fonts.googleapis.com/icon?family=Material+Icons">
    <link rel="stylesheet"
href="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/css/materialize
.min.css">
    <script type="text/javascript" src="https://code.jquery.com/jquery-
2.1.1.min.js"></script>
    <script
src="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/js/materialize.m
in.js"></script>
  </head>
  <body>
    <div class="card-panel teal lighten-2"><h3>Hello World!</h3></div>
  </body>
</html>
```

It will produce the following result.

3. Materialize – Colors

Materialize supports a rich set of color classes. These color classes are inspired and developed considering the colors used in marketing, road signs, and sticky notes.

- red
- pink
- purple
- deep-purple
- indigo
- blue
- light-blue
- cyan
- teal
- green
- light-green
- lime
- yellow
- amber
- orange
- deep-orange
- brown
- grey
- blue-grey
- black
- white
- transparent

Usage

Following is the list of lightness/darkness classes, which can be used to vary the color applied.

- lighten-1
- lighten-2
- lighten-3
- lighten-4
- lighten-5
- darken-1
- darken-2
- darken-3
- darken-4
- accent-1
- accent-2
- accent-3
- accent-4

Example

The following example demonstrates how to use the above classes to render the background or to change the color of the text. In case of background, add the classes as such and in case of text, suffix '-text' to color class and prefix 'text-' to lightning class.

materialize_colors.htm

```

<!DOCTYPE html>
<html>
  <head>
    <title>The Materialize Colors Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">

4. Materialize – Grids

Materialize provides a 12 column fluid responsive grid.

It uses the row and column style classes to define rows and columns respectively.

Sr. No.	Class Name & Description
1	row Specifies a padding-less container to be used for responsive columns. This class is mandatory for responsive classes to be fully responsive.
2	col Specifies a column with sub-classes.

col has several sub-classes meant for different types of screens.

Columns for Small Screen Devices

Following is a list of column-level styles for small screen devices, typically smartphones.

Sr. No.	Class Name & Description
1	s1 Defines 1 of 12 columns with width as 08.33%.
2	s2 Defines 2 of 12 columns with width as 16.66%.
3	s3 Defines 3 of 12 columns with width as 25.00%.
4	s4 Defines 4 of 12 columns with width as 33.33%.
s5 – s11	
12	s12 Defines 12 of 12 columns with width as 100%. Default class for small screen phones.

Columns for Medium Screen Devices

Following is a list of column-level styles for medium screen devices, typically tablets.

Sr. No.	Class Name & Description
1	m1 Defines 1 of 12 columns with width as 08.33%.
2	m2 Defines 2 of 12 columns with width as 16.66%.
3	m3 Defines 3 of 12 columns with width as 25.00%.
4	m4 Defines 4 of 12 columns with width as 33.33%.
m5 - m11	
12	m12 Defines 12 of 12 columns with width as 100%. Default class for medium screen phones.

Columns for Large Screen Devices

Following is a list of column-level styles for large screen devices, typically laptops.

Sr. No.	Class Name & Description
1	l1 Defines 1 of 12 columns with width as 08.33%.
2	l2 Defines 2 of 12 columns with width as 16.66%.
3	l3 Defines 3 of 12 columns with width as 25.00%.
4	l4 Defines 4 of 12 columns with width as 33.33%.
l5 - l11	
12	l12 Defines 12 of 12 columns with width as 100%. Default class for large screen devices.

Usage

Each subclass determines the number of columns of the grid to be used based on the type of a device. Consider the following HTML snippet.

```
<div class="row">
  <div class="col s2 m4 l3">
    <p>This text will use 2 columns on a small screen, 4 on a medium screen,
    and 3 on a large screen.</p>
  </div>
</div>
```

Default columns to be used are 12 on a device, if a sub-class is not mentioned in the class attribute of an HTML element.

Example

materialize_grids.htm

```
<!DOCTYPE html>
<html>
  <head>
    <title>The Materialize Grids Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <link rel="stylesheet"
href="https://fonts.googleapis.com/icon?family=Material+Icons">
    <link rel="stylesheet"

.min.css">
    <script type="text/javascript" src="https://code.jquery.com/jquery-
2.1.1.min.js"></script>
    <script
src="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/js/materialize.m
in.js"></script>
  </head>
  <body>
    <div class="teal">
      <h2>Mobile First Design Demo</h2>
      <p>Resize the window to see the effect!</p>
    </div>
    <hr/>
    <div class="row">
      <div class="col m1 grey center">1</div>
```

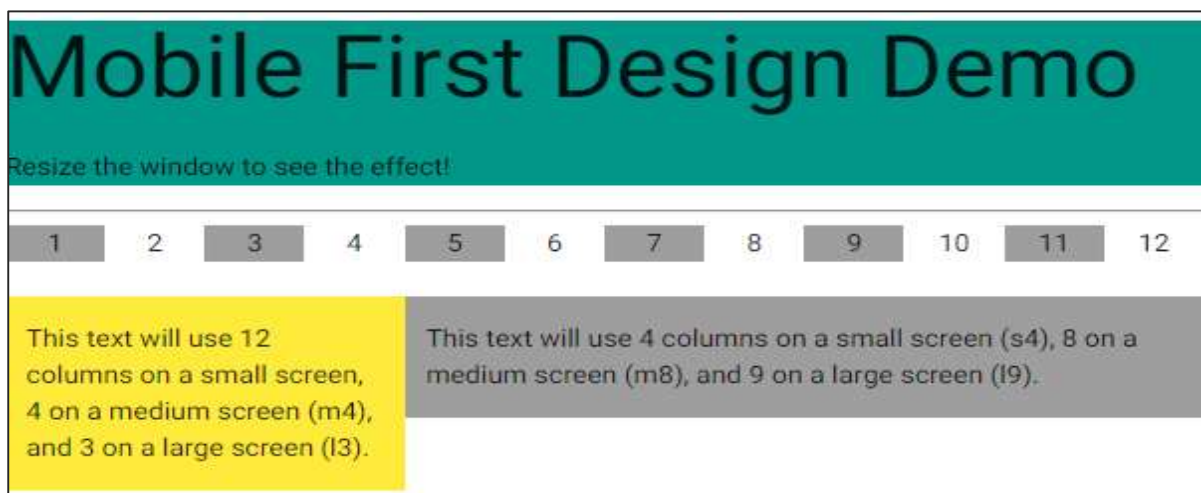

```

<div class="col m1 center">2</div>
<div class="col m1 grey center">3</div>
<div class="col m1 center">4</div>
<div class="col m1 grey center">5</div>
<div class="col m1 center">6</div>
<div class="col m1 center grey">7</div>
<div class="col m1 center">8</div>
<div class="col m1 center grey">9</div>
<div class="col m1 center">10</div>
<div class="col m1 center grey">11</div>
<div class="col m1 center">12</div>
</div>
<div class="row">
  <div class="col m4 l3 yellow">
    <p>This text will use 12 columns on a small screen, 4 on a medium
screen (m4), and 3 on a large screen (l3).</p>
  </div>
  <div class="col s4 m8 l9 grey">
    <p>This text will use 4 columns on a small screen (s4), 8 on a
medium screen (m8), and 9 on a large screen (l9).</p>
  </div>
</div>
</body>
</html>

```

Result

Verify the result.

5. Materialize – Helpers

Materialize has several utility classes useful for day-to-day designing needs.

- **Color utility classes** – For example, .red, .green, .grey and so on
- **Alignment utility classes** – For example, .valign-wrapper, .left-align, .right-align, .center-align, .left, .right
- **Hiding Content utility classes as per device size** – For example, .hide, .hide-on-small-only, .hide-on-med-only, .hide-on-med-and-down, .hide-on-med-and-up and .hide-on-large-only
- **Formatting utility classes** – For example, truncate, hoverable

6. Materialize – Media

Materialize has several classes to make images and videos responsive to different sizes.

- **responsive-img** - It makes an image to resize itself based on the screen size.
- **video-container** - For responsive container having embedded videos.
- **responsive-video** - Makes HTML5 videos responsive.

Example

materialize_media.htm

```
<!DOCTYPE html>
<html>
  <head>

allowfullscreen></iframe>
    </div>
    <div class="video-container">
        <video width="300" height="200" controls autoplay>
            <source src="http://www.tutorialspoint.com/html5/foo.ogg" type="video/ogg" />
            <source src="http://www.tutorialspoint.com/html5/foo.mp4" type="video/mp4" />
            Your browser does not support the video element.
        </video>
    </div>
</body>
</html>

```

Result

Verify the result.

Responsive Embedded Video Demo

7. Materialize – Shadows

Materialize has several special classes to display containers as paper-like cards with shadow.

Sr. No.	Class Name & Description
1	z-depth-0 Removes the shadow of elements having z-depth by default.
2	z-depth-1 Styles a container for any HTML content with 1px bordered shadow. Adds z-depth of 1.
3	z-depth-2 Styles a container for any HTML content with 2px bordered shadow. Adds z-depth of 2.
4	z-depth-3 Styles a container for any HTML content with 3px bordered shadow. Adds z-depth of 3.
5	z-depth-4 Styles a container for any HTML content with 4px bordered shadow. Adds z-depth of 4.
6	z-depth-5 Styles a container for any HTML content with 5px bordered shadow. Adds z-depth of 5.

Example

materialize_shadows.htm

```
<!DOCTYPE html>
<html>
  <head>
    <title>The Materialize Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <link rel="stylesheet"
href="https://fonts.googleapis.com/icon?family=Material+Icons">
    <link rel="stylesheet"
href="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/css/materialize.min.css">
    <script type="text/javascript" src="https://code.jquery.com/jquery-
2.1.1.min.js"></script>
```

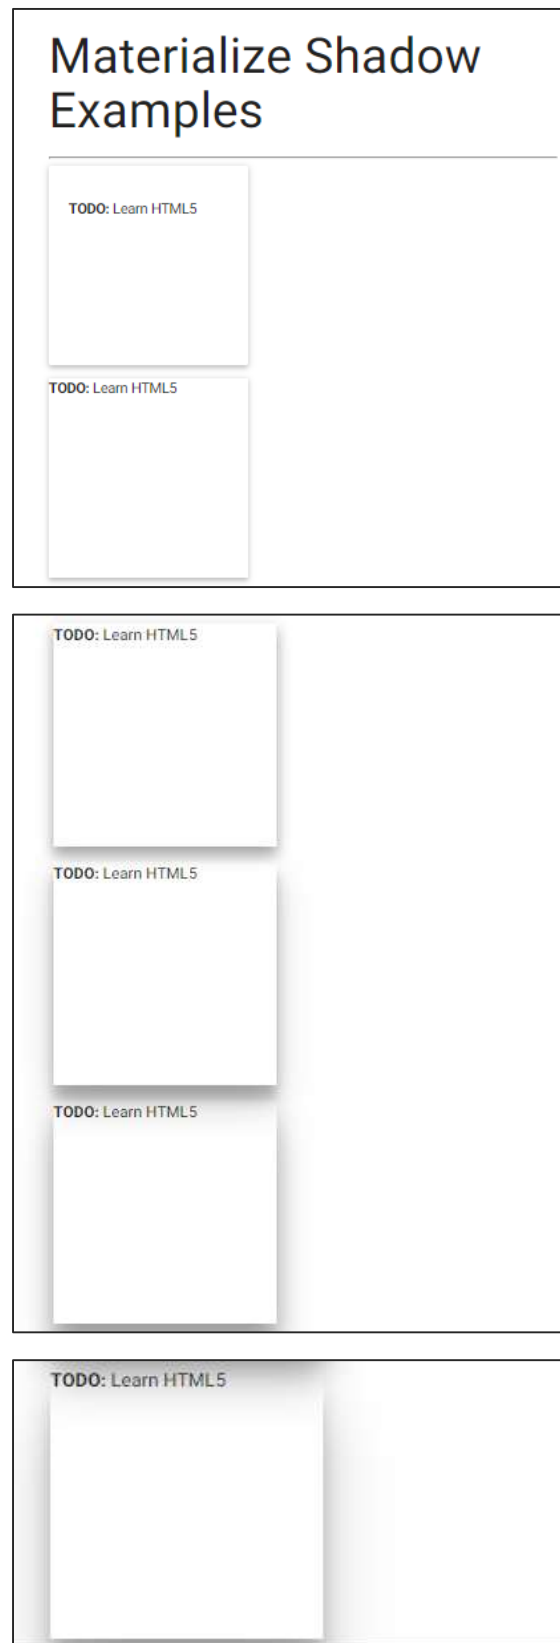

```
<script
src="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/js/materialize.m
in.js"></script>

<style>
  div {
    width : 200px;
    height : 200px;
  }
</style>
</head>
<body class="container">
  <h2>Materialize Shadow Examples</h2>
  <hr/>
  <div class="card-panel">

  </div>
  <div class="z-depth-1">
    <p><b>TODO:</b> Learn HTML5</p>
  </div>
  <div class="z-depth-2">
    <p><b>TODO:</b> Learn HTML5</p>
  </div>
  <div class="z-depth-3">
    <p><b>TODO:</b> Learn HTML5</p>
  </div>
  <div class="z-depth-4">
    <p><b>TODO:</b> Learn HTML5</p>
  </div>
  <div class="z-depth-5">
    <p><b>TODO:</b> Learn HTML5</p>
  </div>
</body>
</html>
```

Result

Verify the result.

8. Materialize – Tables

Materialize can be used to display different types of tables using various styles over table.

Sr. No.	Class Name & Description
1	None Represents a basic table without any border.
2	stripped Displays a stripped table.
3	bordered Draws a table with a border across rows.
4	highlight Draws a highlighted table.
5	centered Draws a table with all the text center aligned in the table.
6	responsive-table Draws a responsive table to show a horizontal scrollbar, if the screen is too small to display the content.

Example

9. Materialize – Typography

Materialize uses **Roboto 2.0** as a standard font. It can be overridden using the following CSS style.

```
html {  
    font-family: GillSans, Calibri, Trebuchet, sans-serif;  
}
```

Following are the examples of headings, blockquotes and free-flow but responsive text.

Example

materialize_typography.htm

```
<!DOCTYPE html>  
<html>  
    <head>  
        <title>The Materialize Typography Example</title>  
        <meta name="viewport" content="width=device-width, initial-scale=1">  
        <link rel="stylesheet"  
href="https://fonts.googleapis.com/icon?family=Material+Icons">  
        <link rel="stylesheet"  
href="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/css/materialize.min.css">  
        <script type="text/javascript" src="https://code.jquery.com/jquery-2.1.1.min.js"></script>  
        <script  
src="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/js/materialize.min.js"></script>  
    </head>  
    <body class="container">  
        <h2>Typography Demo</h2>  
        <hr/>  
        <h3>Headings</h3>  
        <div class="card-panel">  
            <h1>Heading 1</h1>  
            <h2>Heading 2</h2>  
            <h3>Heading 3</h3>  
            <h4>Heading 4</h4>  
            <h5>Heading 5</h5>
```

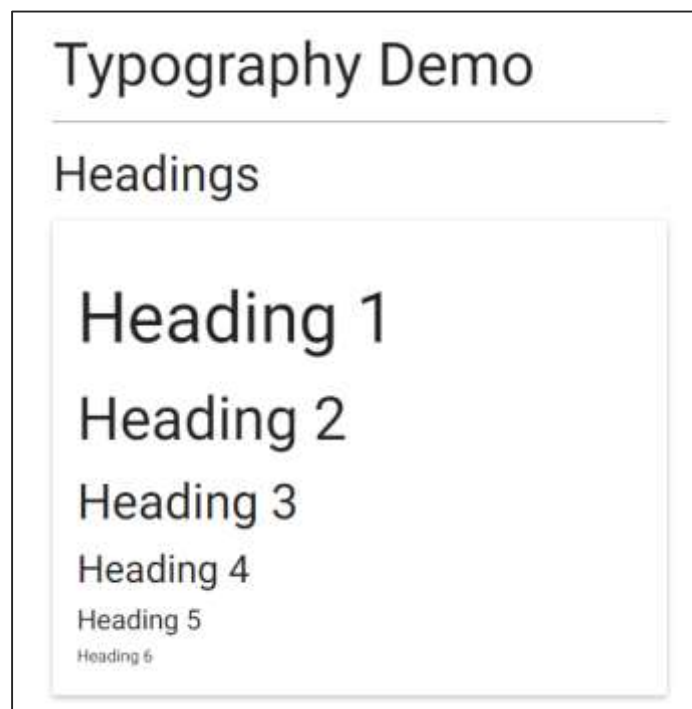

```

        <h6>Heading 6</h6>
    </div>
    <h3>Block Quotes</h3>
    <div class="card-panel">
        <blockquote>
            The latest versions of Apple Safari, Google Chrome, Mozilla Firefox,
            and Opera all support many HTML5 features and Internet Explorer 9.0 will also
            have support for some HTML5 functionality.
        </blockquote>
    </div>
    <h3>Responsive free-flow text</h3>
    <div class="card-panel">

</html>

```

Result

Verify the result.

Block Quotes

The latest versions of Apple Safari, Google Chrome, Mozilla Firefox, and Opera all support many HTML5 features and Internet Explorer 9.0 will also have support for some HTML5 functionality.

Responsive free-flow text

The latest versions of Apple Safari, Google Chrome, Mozilla Firefox, and Opera all support many HTML5 features and Internet Explorer 9.0 will also have support for some HTML5 functionality.

10. Materialize – Badges

Materialize badge component is an onscreen notification, which can be a number or an icon. It is generally used to emphasize the number of items.

Sr. No.	Class Name & Description
1	badge Identifies an element as an MDL badge component. Required for span element.
2	new Adds a "new" class to a badge component gives it a background.

Following are the examples of using badges in different ways.

Example

materialize_badges.htm

```
<!DOCTYPE html>
<html>
  <head>
    <title>The Materialize Badges Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">

11. Materialize – Buttons

Materialize provides different CSS classes to apply various predefined visual and behavioral enhancements to the buttons. Following table mentions the available classes and their effects.

Sr. No.	Class Name & Description
1	btn Sets button or anchor as a Materialize button, required. Sets raised display effect to a button.
2	btn-floating Creates a circular button.
3	btn-flat Sets flat display effect to a button, default.
4	btn-large Creates large buttons.
5	disabled Creates a disabled button.
6	type="submit" Represents an anchor or button as a primary button.
7	waves-effect Sets ripple click effect, can be used in combination with any other classes.

Example

The following example demonstrates the use of mdl-button classes to show different types of buttons.

materialize_buttons.htm

```
<!DOCTYPE html>
<html>
  <head>
    <title>The Materialize Buttons Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">

13. Materialize – Cards

Materialize provides different CSS classes to apply various predefined visual and behavioral enhancements to display various types of cards. Following table mentions the available classes and their effects.

Sr. No.	Class Name & Description
1	card Identifies div element as a Materialize card container. Required on "outer" div.
2	card-content Identifies div as a card content container and is required on "inner" div.
3	card-title Identifies div as a card title container and is required on "inner" title div.
4	card-action Identifies div as a card actions container and assigns appropriate text characteristics to actions text. Required on "inner" actions div; content goes directly inside the div with no intervening containers.
5	card-image Identifies div as a card image container and is required on "inner" div.
6	card-reveal Identifies div as a revealed text container.
7	activator Identifies div as a revealed text container and image to be revealer. Used to show contextual information related to image.
8	card-panel Identifies div as a simple card with shadows and padding.
9	card-small Identifies div as a small sized card. Height: 300px;
10	card-medium Identifies div as a medium sized card. Height: 400px;
11	card-large Identifies div as a large sized card. Height: 500px;

Example

The following example showcases the use of card classes to showcase various types of cards.

materialize_cards.htm

15. Materialize – Collections

Materialize provides special classes to represent various types of collections, where a collection represents a group of related information items.

Sr. No.	Class Name & Description
1	collection Sets the div or ul container as a collection.
2	collection-item Sets the a or li item as a collection item.
3	active Shows the a or li item as an active collection item.
4	with-header Marks the collection to have a header.
5	collection-header Sets the a or li item as a collection header.
6	avatar Sets the a or li item as an avatar item.
7	dismissible Enables the collection items to be swiped away. Works on touch screen devices only.

Example

Following example demonstrates the use of collection classes to showcase creating various types of collection.

materialize_collections.htm

```
<!DOCTYPE html>
<html>
  <head>

16. Materialize – Footer

Materialize provides special classes to represent various types of collections where a collection represents a group of related information items.

Sr. No.	Class Name & Description
1	page-footer Sets the div container as a footer.
2	footer-copyright Sets the div container as a footer-copyright container.

Example

Following example demonstrates the use of footer classes to showcase a sample footer.

materialize_footer.htm

```
<html>
  <head>
    <title>The Materialize Collections Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <link rel="stylesheet"
href="https://fonts.googleapis.com/icon?family=Material+Icons">
    <link rel="stylesheet"
href="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/css/materialize
.min.css">
    <script type="text/javascript" src="https://code.jquery.com/jquery-
2.1.1.min.js"></script>
    <script
src="https://cdnjs.cloudflare.com/ajax/libs/materialize/0.97.3/js/materialize.m
in.js"></script>
  </head>
  <body class="container">
    <footer class="page-footer">
      <div class="row">
        <div class="col s12 m6 l6">
          <h5 class="white-text">Footer Content</h5>
        </div>
        <div class="col">
          <ul>
```

```

        <li><a href="#" class="grey-text text-lighten-4
right">Help</a></li>
        <li><a href="#" class="grey-text text-lighten-4
right">Privacy and Terms</a></li>
        <li><a href="#" class="grey-text text-lighten-4
right">User Agreement</a></li>
    </ul>
</div>
</div>
</div>
<div class="footer-copyright">
<div class="container">
    © 2016 Copyright Information
    <a class="grey-text text-lighten-4 right" href="#">Links</a>
</div>
</div>
</footer>
</body>
</html>

```

Result

Verify the result.

17. Materialize – Form

Materialize has a very beautiful and responsive CSS for form designing. Following CSS are used:

Sr. No.	Class Name & Description
1	input-field Sets the div container as an input field container. Required.
2	validate Adds validation styles to an input field.
3	active Shows an input with active style.
4	materialize-textarea Used to style a text-area. Text-areas will auto resize to the text inside.
5	filled-in Shows a checkbox with filled box style.

Example

Following example demonstrates the use of input classes to showcase a sample form.

materialize_forms.htm

```
<html>
  <head>
    <title>The Materialize Form Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <link rel="stylesheet"
href="https://fonts.googleapis.com/icon?family=Material+Icons">

value="female" disabled>
            <label for="dontknow1">Don't know (Disabled)</label>
        </p>
    </div>
</div>
</form>
</div>
</body>
</html>

```

Result

Verify the result.

The image shows a Materialize CSS form with the following elements:

- Username:** A text input field with the value "Mahesh".
- Password:** A password input field with the value "Password".
- Email:** An email input field with the value "Email".
- Address:** An address input field.
- Comments:** A disabled text area with the value "Comments (Disabled)".
- Married:** A checked checkbox.
- Single:** An unchecked checkbox.
- Don't know (Disabled):** A disabled checkbox.
- Male:** An unselected radio button.
- Female:** A selected radio button.
- Don't know (Disabled):** A disabled radio button.

Important Input Controls

Materialize provides CSS for numerous types of input controls. Following table details the same.

Sr. No.	Input Type Name & Description
1	Select Various types of selects inputs
2	Switches Various types of switches

3	<u>File</u> Various types of file inputs
4	<u>Range</u> Various types of range inputs
5	<u>Date Picker</u> Date Picker
6	<u>Character Counter</u> Character Counter

Selects

Example

The following example demonstrates different types of select options.

materialize_selects.htm

```
<html>

    <select class="browser-default" disabled>
        <option value="" disabled selected>Select Fruit</option>
        <option value="1">Mango</option>
        <option value="2">Orange</option>
        <option value="3">Apple</option>
    </select>
</div>
</form>
</div>

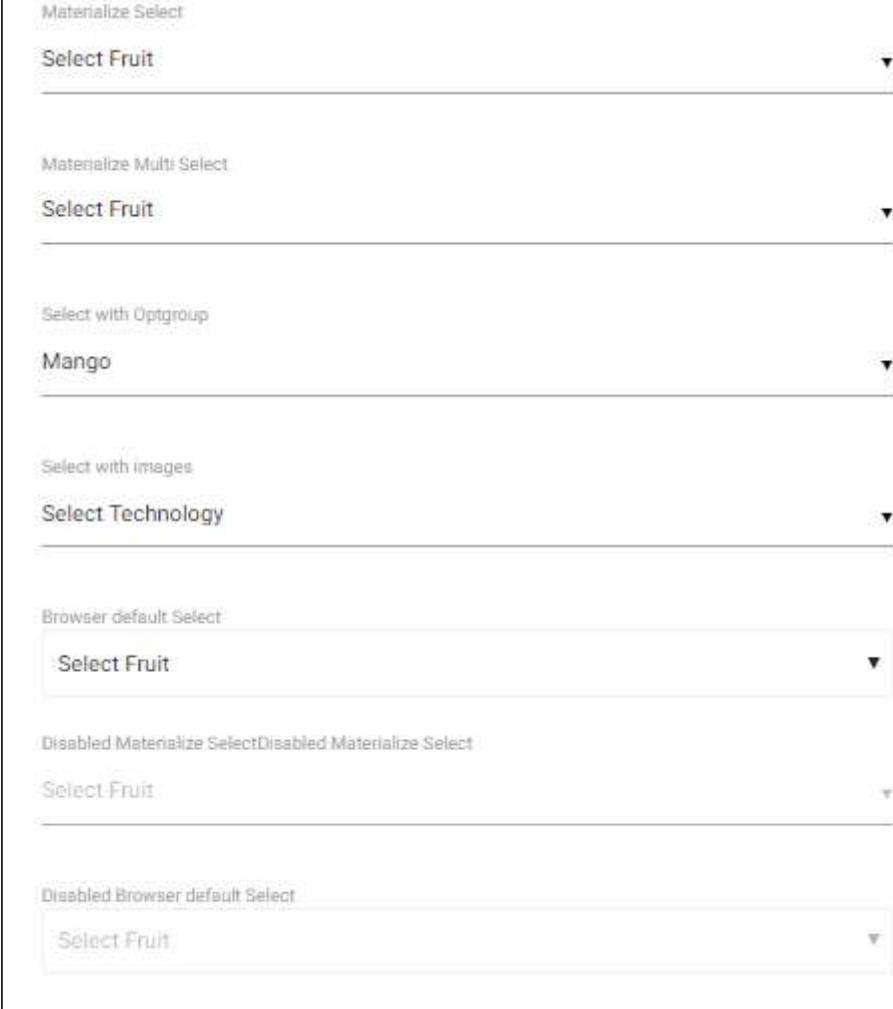

```

```
</body>
</html>
```

Result

Verify the result.

The screenshot displays a collection of Materialize Select components. At the top, a 'Materialize Select' is shown with the text 'Select Fruit' and a downward arrow. Below it is a 'Materialize Multi Select' with the same text and arrow. The third component is a 'Select with Optgroup' showing 'Mango' as the selected option. The fourth is a 'Select with images' with the text 'Select Technology'. The fifth is a 'Browser default Select' with the text 'Select Fruit'. The sixth is a 'Disabled Materialize Select' with the text 'Select Fruit'. The seventh is a 'Disabled Browser default Select' with the text 'Select Fruit'. Each component is enclosed in a light gray border and has a small downward arrow on the right side.

Switches

Example

The following example demonstrates different types of switches. A checkbox is styled as a switch by applying class switch on its parent div container.

materialize_switches.htm

```
<html>
  <head>

18. Materialize – Icons

Materialize supports the following popular icon libraries:

- Font Awesome Icons
- Google Material Icons
- Bootstrap Icons

Usage

To use an icon, put the name of the icon in the class of an HTML `<i>` element. To control the size of an icon, you can use the following classes:

Sr. No.	Class Name & Description
1	tiny Draws an icon of very small size. 1rem.
2	small Draws an icon of small size. 2rem
3	medium Draws an icon of medium size. 4rem.
4	large Draws an icon of large size. 6rem.

Example

21. Materialize – Preloader

Materialize provides various CSS classes to apply various predefined visual and behavioral enhancements to display various types of preloaders or progress bars. The following table mentions the available classes and their effects.

Sr. No.	Class Name & Description
1	progress Identifies an element as a progress component. Required for div element.
2	determinate Sets the basic Materialize behavior to progress indicator.
3	indeterminate Sets animation to progress indicator.

Example

Following is an example of using preloaders in different ways.

materialize_preloader.htm

```
<html>
  <head>
    <title>The Materialize Preloader Example</title>
    <meta name="viewport" content="width=device-width, initial-scale=1">

22. Materialize – Collapsible

Materialize provides various CSS classes to apply various predefined visual and behavioral enhancements to display various types of accordions. The following table mentions the available classes and their effects.

Sr. No.	Class Name & Description
1	collapsible Identifies an element as a materialize collapsible component. Required for ul element.
2	collapsible-header Sets div as a section header.
3	collapsible-body Sets div as a section content container.
4	popout Creates a popout collapsible.
5	active Opens a section.
6	expandable Marks a collapsible component as expandable.
7	accordion Marks a collapsible component as accordion.

Following is an example of using accordions in different ways.

Example

materialize_collapsible.htm

23. Materialize – Dialogs

Materialize provides various special methods to show unobtrusive alerts to the users. Materialize provides a term toast for them. Following is the syntax to show a dialog as a toast.

```
Materialize.toast(message, displayLength, className, completeCallback);
```

Where,

- **message** - Message to be displayed to the user.
- **displayLength** - Duration of the message after which it will disappear.
- **className** - Style class to be applied to the toast. For example, 'rounded'.
- **completeCallback** - Callback method to be called once toast is dismissed.

For tooltip, Materialize provides the following CSS classes.

Sr. No.	Class Name & Description
1	tooltipped Identifies a component to have a tooltip.
2	data-position Position of the tooltip; bottom, top, left, or right.
3	data-delay Sets the duration of the tooltip after which it will disappear.
4	data-tooltip Sets the tooltip contents.

Example

Following example demonstrates the use of toasts and tooltips.

materialize_dialogs.htm

```

in.js"></script>

    <script>
    function showToast(message, duration){
        Materialize.toast(message, duration);
    }
    function showToast1(message, duration){
        Materialize.toast('<i>' + message + '</i>', duration);
    }
    function showToast2(message, duration){
        Materialize.toast(message, duration, 'rounded');
    }
    function showToast3(message, duration){
        Materialize.toast('Hello World!', duration, '', function toastCompleted(){
            alert('Toast dismissed!');
        });
    }
</script>
</head>
<body class="container">
    <h4>Toasts</h4>
    <a class="btn" onclick="showToast('Hello World!', 3000)">Normal Alert!</a>
    <a class="btn" onclick="showToast1('Hello World!', 3000)">Italic Alert!</a>
    <a class="btn" onclick="showToast2('Hello World!', 3000)">Rounded Alert!</a>
    <br/><br/>
    <a class="btn" onclick="showToast3('Hello World!', 3000)">Callback Alert!</a>
    <h4>Tooltips</h4>
    <a class="btn tooltiped" data-position="bottom" data-delay="50" data-
tooltip="I am in bottom!">Bottom</a>
    <a class="btn tooltiped" data-position="left" data-delay="50" data-
tooltip="I am in left!">Left</a>
    <a class="btn tooltiped" data-position="right" data-delay="50" data-
tooltip="I am in right!">Right</a>
    <a class="btn tooltiped" data-position="top" data-delay="50" data-
tooltip="I am in top!">Top</a>
